Pre-generated API Queries

This page contains a collection of pre-generated URLs that will return data through the Exoplanet Archive's [Table Access Protocol \(TAP\)](#) service and [Application Programming Interface \(API\)](#). The URLs can be copied and pasted into a web browser (for https:// queries) or a command-line interface (for wget queries). Note that you must have [wget installed](#) for wget queries.

Note: The default file format for all of the queries on this page is IPAC table format. To change formats, refer to the instructions in the [File Format](#) section of the API User Guide.

To request a specific pre-built query for this page, please submit a [Helpdesk](#) ticket.

To Do This...	Copy This...
All planetary solutions for confirmed planets with all columns from the Planetary Systems Table. Output is in comma separated (csv) format.	<code>https://exoplanetarchive.ipac.caltech.edu/TAP/sync?query=select+*+from+ps&format=csv</code>
	<code>wget "https://exoplanetarchive.ipac.caltech.edu/TAP/sync?query=select+*+from+ps&format=csv" -O "confirmed_planets.csv"</code>
Return a single planetary solution for confirmed planets with all columns from the Planetary Systems Composite Parameters Table. Output is in json format.	<code>https://exoplanetarchive.ipac.caltech.edu/TAP/sync?query=select+*+from+pscomppars&format=json</code>
	<code>wget "https://exoplanetarchive.ipac.caltech.edu/TAP/sync?query=select+*+from+pscomppars&format=json" -O "confirmed_planets.json"</code>
Return a list of stars known to host exoplanets. Output is a fixed-column width (IPAC format) and sorted in ascending order.	<code>https://exoplanetarchive.ipac.caltech.edu/TAP/sync?query=select+distinct+hostname+from+ps+order+by+hostname+asc&format=ipac</code>
	<code>wget "https://exoplanetarchive.ipac.caltech.edu/TAP/sync?query=select+distinct+hostname+from+ps+order+by+hostname+asc&format=ipac" -O "stars_hosting_exoplanets.tbl"</code>
Find the default planetary solution for all confirmed planets discovered by Kepler. Output is in VOTable format in ascending order of planet name.	<code>https://exoplanetarchive.ipac.caltech.edu/TAP/sync?query=select+*+from+ps+where+default_flag+=+1+and+disc_facility+LIKE+'Kepler'+order+by+pl_name+asc&format=votable</code>
	<code>wget "https://exoplanetarchive.ipac.caltech.edu/TAP/sync?query=select+*+from+ps+where+default_flag+=+1+and+disc_facility+LIKE+'Kepler'+order+by+pl_name+asc&format=votable" -O "confirmed_kepler_field.xml"</code>
Return all columns for the default solution in the Planetary Systems Table for confirmed planets that transit their host stars. Output is in tab-separated format, sorted	<code>https://exoplanetarchive.ipac.caltech.edu/TAP/sync?query=select+*+from+ps+where+tran_flag=1+and+default_flag=1+order+by+pl_name&format=tsv</code>
	<code>wget "https://exoplanetarchive.ipac.caltech.edu/TAP/sync?query=select+*+from+ps+where+tran_flag=1+and+default_flag=1+order+by+pl_name&format=tsv"</code>

alphabetically by the host star name.	" -O "planets_transit_host.tbl"
Return a current list of non-confirmed Kepler planet candidates from the KOI Cumulative list.	https://exoplanetarchive.ipac.caltech.edu/TAP/sync? query=select+*+from+cumulative+where+koi_disposition+like+'CANDIDATE'&format=ipac wget "https://exoplanetarchive.ipac.caltech.edu/TAP/sync? query=select+*+from+cumulative+where+koi_disposition+like+'CANDIDATE'&format=ipac" -O "nonconf_planet_cand.tbl"
Return a list of K2 targets from the K2 Campaign 5 (E).	https://exoplanetarchive.ipac.caltech.edu/TAP/sync? query=select+*+from+k2targets+where+k2_campaign_str='E'&format=ipac wget "https://exoplanetarchive.ipac.caltech.edu/TAP/sync? query=select+*+from+k2targets+where+k2_campaign_str='E'&format=ipac" -O "k2_targets_c5.tbl"
Return all default parameters for one particular KOI in the KOI Cumulative table.	https://exoplanetarchive.ipac.caltech.edu/TAP/sync? query=select+*+from+cumulative+where+kepoi_name='K00007.01'+OR+kepoi_name='K00742.01'&format=ipac wget "https://exoplanetarchive.ipac.caltech.edu/TAP/sync? query=select+*+from+cumulative+where+kepoi_name='K00007.01'+OR+kepoi_name='K00742.01'&format=ipac" -O "koi_OR.tbl"
Find Kepler planetary candidates from the KOI Cumulative Table smaller than 2Re with equilibrium temperatures between 180–303K.	https://exoplanetarchive.ipac.caltech.edu/TAP/sync? query=select+*+from+cumulative+where+koi_prad<2+and+koi_teq>180+and+koi_teq<303+and+koi_disposition+like+'CANDIDATE'&format=ipac wget "https://exoplanetarchive.ipac.caltech.edu/TAP/sync? query=select+*+from+cumulative+where+koi_prad<2+and+koi_teq>180+and+koi_teq<303+and+koi_disposition+like+'CANDIDATE'&format=ipac" -O "koi_teff_180-303.tbl"
Return a list of microlensing planets from the Planetary Systems Composite Parameters table where the number of photometric time series in the archive is non-zero.	https://exoplanetarchive.ipac.caltech.edu/TAP/sync? query=select+pl_name,st_nphot+from+pscomppars+where+discoverymethod+like+'%Micro%'+and+st_nphot>0&format=tsv wget "https://exoplanetarchive.ipac.caltech.edu/TAP/sync? query=select+pl_name,st_nphot+from+pscomppars+where+discoverymethod+like+'%Micro%'+and+st_nphot>0&format=tsv" -O "micro_ts.tbl"
Return all parameters from Planetary Systems Composite Parameters Table for confirmed planets discovered by TESS. Output is in JSON, formatted and sorted in descending order by orbital period.	https://exoplanetarchive.ipac.caltech.edu/TAP/sync? query=select+*+from+pscomppars+where+disc_facility+like+'%TESS%'+order+by+pl_orbper+desc&format=json wget "https://exoplanetarchive.ipac.caltech.edu/TAP/sync? query=select+*+from+pscomppars+where+disc_facility+like+'%TESS%'+order+by+pl_orbper+desc&format=json" -O "TESS_planes.json"
